PROFILE

Electrical engineer with about four years of experience in defence and telecommunications, spanning the full path from physical-layer signal processing to formal system requirements. At Rohde & Schwarz, owned requirements engineering for a secure software-defined radio (L0–L4 decomposition, verifiable functional and non-functional requirements, traceability and baselines in Jama across the V-model), after a year integrating and validating 2G–5G RF test subsystems with Python test automation. Previously developed FSK/PSK demodulators and radar signal analysis methods as a DSP engineer in MATLAB/Simulink.

EXPERIENCE

Rohde & Schwarz GmbH & Co. KG (via K-tronik GmbH) — Munich, Germany

Requirements Engineer — Jul 2025 – Oct 2026

- Decomposed stakeholder and system requirements across multiple subsystems of a secure software-defined radio through a structured L0–L4 hierarchy in Jama, authoring atomic, unambiguous and verifiable functional and non-functional requirements with documented rationale and design constraints.
- Led requirement review and clarification sessions with stakeholders, domain experts and developers; challenged requirements for measurability, testability and splitability and drove the resolution of gaps and conflicts (e.g. unbounded timing constraints, undefined interface content).
- Defined acceptance criteria and verification methods for each requirement and maintained end-to-end traceability across requirement levels and to the corresponding verification activities of the test team.
- Defined tagging and NFR-categorisation conventions and prepared Jama baselines ahead of formal review cycles, coordinating with systems, hardware and test engineers across the V-model lifecycle.

Software Integration and Test Engineer – RF Test Systems — Oct 2024 – Jun 2025

- Integrated and validated RF subsystems for 3GPP cellular standards (2G–5G), including bring-up, acceptance and regression testing.
- Performed system-level debugging and root-cause analysis of HW/SW issues; created and tracked error reports.
- Developed automated Python test scripts to improve regression and release-testing efficiency.
- Operated RF measurement equipment (spectrum analysers, signal generators, communication testers) to evaluate system performance against 3GPP requirements.

Career break: relocation to Germany — Turkey / Germany

German language studies (A2) — Jul 2023 – Sep 2024

Anayurt Technology and Defense — Ankara, Turkey

Digital Signal Processing Engineer — Jun 2021 – Jun 2023

- Designed and optimised RF communication systems (HF, VHF, UHF), implementing demodulators for FSK and PSK signals.
- Performed radar signal analysis and classification, applying DSP techniques to evaluate bandwidth, modulation type, frequency range and symbol rate.
- Used MATLAB/Simulink for algorithm development, testing and validation of signal processing methods.
- Supported the development of an advanced UAV control system, focusing on flight-control algorithms and autonomous operation.

Internships — Ankara, Turkey

ATEL Technology and Defense: R&D Intern (2020) · Türk Telekom: MPLS & Transmission Intern (2019)
2019 – 2020

EDUCATION

Bilkent University Ankara, Turkey
B.Sc. Electrical and Electronics Engineering Jun 2022
Taught in English.

PROJECTS

- **UAV – energy optimisation** (TÜBİTAK UAV Contest, 2019): Autonomous mission UAV; pitch/yaw/roll control for energy efficiency; subsystem design and modelling.
- **Spoken number recognition** (FPGA, VHDL, BASYS3): Real-time recognition of spoken digits on an FPGA.

SKILLS

Requirements & systems	L0–L4 decomposition, functional and non-functional requirements, requirement quality (measurability, testability, traceability), verification methods and acceptance criteria, stakeholder reviews, baselining and review preparation, V-model, Jama
RF & test systems	Spectrum analysers, signal generators, communication testers; RF subsystem integration and validation; bring-up, acceptance, regression and release testing; HW/SW root-cause analysis; 3GPP 2G–5G
Signal processing	FSK/PSK demodulation, radar signal analysis and classification (bandwidth, modulation, symbol rate), algorithm development and validation in MATLAB/Simulink
Programming	Python (test automation, scripting, data analysis), MATLAB/Simulink, C++, VHDL, JavaScript
Tools	Jama, Git, VS Code, Xilinx Vivado, FPGA (BASYS3), Raspberry Pi, Arduino, Android Studio
Languages	Turkish (native) · English (fluent) · German (A2; B1 in progress)
Certification	Google Data Analytics (Coursera)
Activities	IEEE Bilkent University Student Branch, Vice Chair (2018–2020), UAV project lead
