PROFILE

Requirements and systems engineer with a technical background in RF communication systems and digital signal processing. At Rohde & Schwarz, decomposes system-level requirements (L0–L4), writes testable functional and non-functional requirements and maintains traceability in Jama for a secure software-defined radio. Combines hands-on RF integration and test experience (3GPP 2G–5G) with DSP expertise, giving an end-to-end view from physical-layer behaviour up to formal system requirements. EU Blue Card holder in Germany.

EXPERIENCE

Rohde & Schwarz GmbH & Co. KG (via K-tronik GmbH)

Munich, Germany

Requirements Engineer

Jul 2025 – Present

- Decompose and refine stakeholder and system requirements across multiple subsystems of a secure software-defined radio through a structured L0–L4 hierarchy in Jama.
- Review requirements for measurability, testability and splittability; find gaps, ambiguities and conflicts and drive their resolution with stakeholders and developers.
- Author functional and non-functional requirements to established quality criteria; define tagging and NFR-categorisation conventions and maintain traceability across levels.
- Define acceptance criteria and verification methods so each requirement is traceable to its verification activity; prepare Jama baselines for formal reviews across the V-model lifecycle.

Software Integration and Test Engineer – RF Test Systems

Oct 2024 – Jun 2025

- Integrated and validated RF subsystems for 3GPP cellular standards (2G–5G), including bring-up, acceptance and regression testing.
- Performed system-level debugging and root-cause analysis of HW/SW issues; created and tracked error reports.
- Developed automated Python test scripts to make regression and release testing faster.
- Operated spectrum analysers, signal generators and communication testers to evaluate performance against 3GPP requirements.

Career transition: relocation to Germany

Turkey / Germany

Self-directed projects and German language study

Jul 2023 – Sep 2024

- Completed the relocation and German residence-visa process.
- Kept technical skills active through programming and data-analysis projects while studying German to A2.

Anayurt Technology and Defense

Ankara, Turkey

Digital Signal Processing Engineer

Jun 2021 – Jun 2023

- Designed and optimised RF communication systems (HF, VHF, UHF), implementing demodulators for FSK and PSK signals.
- Analysed and classified radar signals, applying DSP techniques to estimate bandwidth, modulation type, frequency range and symbol rate.
- Used MATLAB/Simulink for algorithm development, testing and validation.
- Supported the development of an advanced UAV control system, focusing on flight-control algorithms and autonomous operation.

ATEL Technology and Defense Industry Inc.

Ankara, Turkey

R&D Intern

Summer 2020

- Contributed to hardware component optimisation (CPUs, displays, jammers).

- Assisted in operating and maintaining MPLS and DSLAM-based transmission systems.

EDUCATION

Bilkent University

Ankara, Turkey

B.Sc. Electrical and Electronics Engineering

Jun 2022

Taught entirely in English.

PROJECTS

- **Autonomous UAV – energy optimisation** (TÜBİTAK UAV Turkey contest, 2019): Designed and built a UAV that completed its mission tasks autonomously; optimised energy efficiency and flight performance through pitch, yaw and roll control; designed subsystems and coordinated manufacturing.
- **Spoken number recognition** (FPGA, VHDL, BASYS3): Real-time spoken-digit recognition with the signal processing implemented on FPGA.
- **Mini theremin** (FPGA, HC-SR04): Touchless instrument: an ultrasonic distance sensor controls the pitch generated on the FPGA.
- **Further projects** (Python, MATLAB, Raspberry Pi): Smart-house system with an Android app, digit recognition in MATLAB, and machine-learning classifiers in Python.

SKILLS

Requirements & systems	L0–L4 decomposition, functional and non-functional requirements, measurability, testability, traceability, acceptance criteria, baselining, V-model, Jama
RF & test	Spectrum analysers, signal generators, communication testers, RF subsystem integration and validation, regression and release testing, 3GPP 2G–5G
Programming	Python (automation, test scripting), MATLAB/Simulink, C++, VHDL, JavaScript
Tools & platforms	Jama, Git, VS Code, Xilinx Vivado, FPGA (BASYS3), Raspberry Pi, Arduino, Android Studio
Languages	Turkish (native) · English (fluent) · German (B1 in progress)
Certification	Google Data Analytics (Coursera)
Activities	IEEE Bilkent University Student Branch, Vice Chair (2018–2020): led a UAV project from concept to prototype.
